## Peer review report

### Peer review report 2 on “Impact of frailty on outcomes in geriatric femoral neck fracture management: An analysis of national surgical quality improvement program dataset – Observational study”

#### 1. Original submission

##### 1.1. Recommendation

Minor Revision.

##### 1.2. Comments to the author

This is well-written article. The topic is important. There are several factors defined for comorbidity factors in hip fracture surgery. Definition of ‘Frailty’ has not been well described in orthopaedic practise, however definition of ‘physiologic age’ is used frequently. This study would clarify this statement. The only limitation of the study is the short period of follow-up.

Title

OK.

Abstract

It is better to state the study type, retrospective/prospective?

Introduction

OK.

Methods

Did you exclude the patients who required additional surgeries other than hip for concomitant injuries?

Did you perform any subgroup evaluation about osteoporosis?

Results

OK.

Discussion

Discussion flows smoothly like introduction. Starting with a brief paragraph, defining the strengths and limitations of the study, and dictating the conclusion in a simple and clear way are good for discussion.

Conclusion

OK.
